PROFESSIONAL SUMMARY

Final-year B.Tech CS student specializing in Cloud Computing & Virtualization with hands-on AWS, Terraform, CI/CD, and full-stack mobile development experience. Built production-grade self-healing infrastructure at IBM and shipped KhelSaathi, a real-time location-based sports app supporting 10,000+ concurrent WebSocket connections with sub-2s response time. Seeking SDE / Cloud / DevOps roles.

SKILLS

Languages: Java, JavaScript, SQL, HTML, CSS

Cloud (AWS): EC2, IAM, Auto Scaling, CloudWatch, S3, VPC, Lambda, ELB

DevOps & CI/CD: Terraform (IaC), Docker, GitHub Actions, Jenkins, Git, Linux, Bash

Monitoring: Prometheus, Grafana, Alertmanager, CloudWatch

Backend & DB: Node.js, Express.js, MongoDB, MySQL, Socket.io, REST APIs, Mongoose

PROJECTS

KhelSaathi – Smart Sports Partner Finder

2025 – 2026

React Native • Node.js • Express.js • MongoDB • Socket.io • Google Maps API • JWT • Docker • Cloudinary

- Built a cross-platform mobile app (Android & iOS) connecting sports enthusiasts by location; engineered Socket.io backend supporting 10,000+ concurrent WebSocket connections with <2s API response time.
- Designed geospatial-indexed MongoDB schema via Mongoose, reducing nearby-player query latency by 40% vs unindexed baseline; implemented JWT-secured REST APIs and end-to-end message delivery under 300ms.
- Containerized Node.js + MongoDB services with Docker; deployed on AWS/Render with load balancing targeting 99.5% uptime; integrated Google Maps geolocation and Cloudinary media storage.

Self-Healing Cloud Infrastructure

2025

AWS EC2 • Auto Scaling • CloudWatch • Terraform • Prometheus • Grafana • Alertmanager

- Provisioned fault-tolerant AWS architecture with Terraform IaC; Auto Scaling policies auto-replaced failed EC2 instances, achieving 99.9% simulated uptime – infrastructure setup time cut from hours to 8 minutes.
- Integrated Prometheus + Grafana + Alertmanager monitoring 5+ system metrics; alert-triggered recovery workflows fired within 60s of anomaly, reducing MTTR by 70% vs manual incident response.

Cloud-Based Traffic Routing System

2024

HTML • CSS • JavaScript

- Developed dynamic traffic routing platform processing real-time congestion data for route optimization, targeting 25% reduction in simulated route decision time vs static mapping.

EXPERIENCE

IBM – Project Intern

Jun 2024 – Aug 2024 | Remote

Self-Healing Cloud Infrastructure on AWS

- Automated AWS fault recovery using CloudWatch alarms + Auto Scaling triggers, reducing manual intervention time by 70% and achieving 99.9% uptime in load tests.
- Provisioned EC2, VPC, IAM, S3 entirely via Terraform IaC; cut deployment time from hours to 8 minutes with fully reproducible, version-controlled infrastructure.
- Built observability stack (Prometheus + Grafana + Alertmanager) across 5+ metrics with sub-60s alert-to-recovery automated workflows.

EDUCATION

University of Petroleum and Energy Studies (UPES), Dehradun

Aug 2022 – Present

B.Tech Computer Science Engineering – Cloud Computing & Virtualization Technology

CERTIFICATIONS

AWS Academy Cloud Architecting • AWS Academy Cloud Security Foundations • AWS Academy Cloud Practitioner Essentials • Infosys Software Engineering & Agile • Infosys DBMS Part 1
